

# The Open Teach-R Project

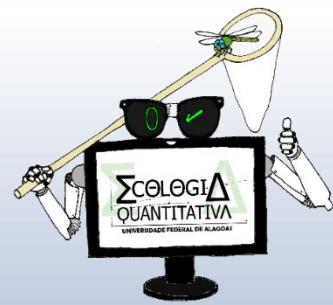

**A short and friendly R introduction:**  
a basic R course for Biological Sciences

**Marcos V. C. Vital**

Lab. de Ecologia Quantitativa, UFAL, Brazil

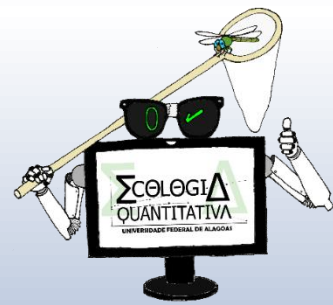

<https://marcosvital.github.io>

What (the heck) is R?

- R is a software for data analysis and visualization – and you should start learning with that in mind.
- R is also a programming language and environment – but you don't need to worry about that if you don't want to.

## Why should you learn R?

- R is Open software.
  - So it's free to use and distribute;
  - And is also open for modification (see below why this matters a lot).
- [course under construction]
